

*„Thanks to Fronius we can enjoy bespoke photovoltaics and battery charging solutions from a single source – not to mention fantastic quality.“*

Willi Breitenfellner  
Facility Manager and Procurement Manager at Schachinger Logistik Holding GmbH

/ Schachinger Logistik Holding GmbH is a family-owned enterprise employing 555 people at 15 locations in Austria and its neighbouring countries. Under the name “Schachinger marken & frische”, the company operates as a holistic logistics solutions specialist for the food industry. Sustainability is one of Schachinger’s core principles, which is why the logistics centre in Stockerau is powered exclusively by electricity from the company’s own photovoltaic system.

/ To harness the energy generated as efficiently as possible, Schachinger relies on technology from Fronius (a total of 35 Fronius inverters are in operation at the Schachinger site). These have been perfectly adapted to the solar modules of the photovoltaic system and convert the direct current generated into alternating current. The SnapINverter system developed by Fronius not only ensures that the installation is quick and cost effective, but any repair and maintenance work too.

/ Schachinger also turns to Fronius when its fleet of 30 electrically powered forklift trucks need to be charged. The innovative Selectiva devices use the new Ri charging process to provide an extremely gentle, reliable and energy-efficient charge for the traction batteries. They minimise the overcharging responsible for high energy losses and harmful warming of the battery, thereby slashing operating costs and ensuring a longer battery life, as well as guaranteeing the permanent availability of the forklift truck fleet.

**CUSTOMER INFORMATION**

Company name	Schachinger Logistik Holding GmbH
Location	Stockerau, Austria
Sector	Logistics
Forklift truck brand	Jungheinrich
Battery brand	Banner
Fronius Portfolio	Selectiva battery charging systems; Eco & Symo inverters
Accessories	Wall bracket
